The Chaffinch (*Fringilla caelebs*) is one of the commonest of British birds and a member of the Finch family. The eggs are usually four or five in number, of pale, purplish-buff colour, streaked and spotted with reddish-brown. The Clover or Trefoil (*Trifolium*) is a native chiefly of temperate climates abounding most of all in Europe, it being used largely as pasturage and fodder for cattle. There are many varieties, of which the Red (*T. pratense*) and the White or Dutch (*T. repens*) are most common in Britain.
